

431 Class 01

Thomas E. Love, Ph.D.

2022-08-30

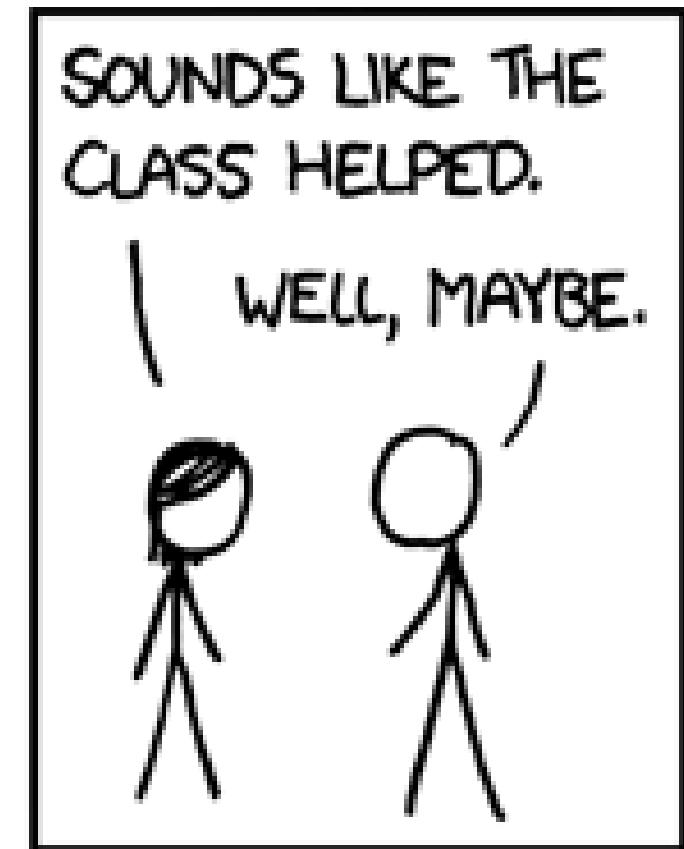

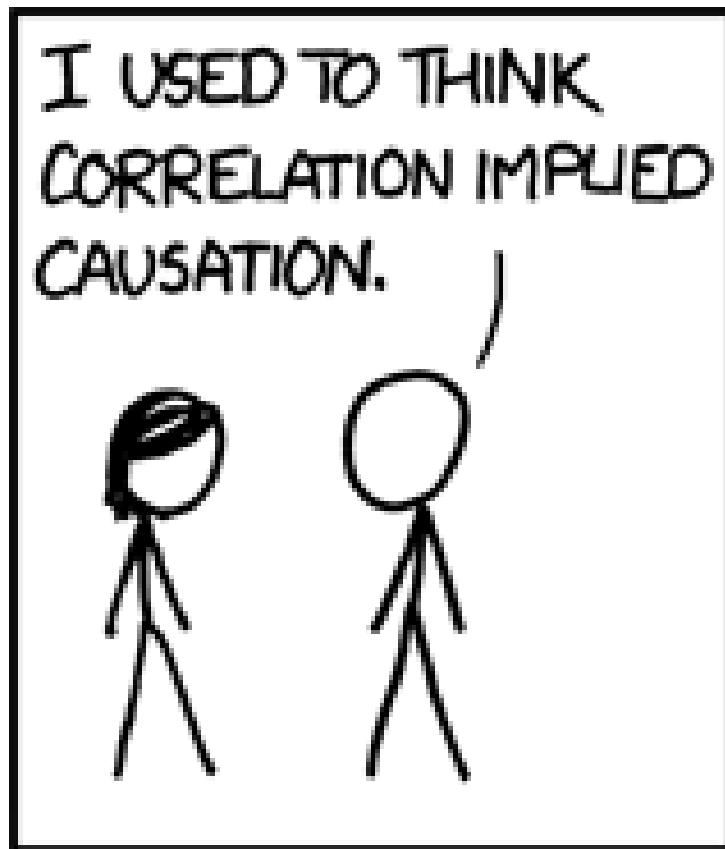

Getting To These Slides

Our web site: <https://thomaselove.github.io/431-2022/>

Visit the [Course Calendar](#) at the top of the page, which will take you to the Class 01 README page.

- These Slides for Class 01 linked at the Class 01 README.
 - We'll look at the **HTML slides** during class.
 - We also provide the Quarto code I used to build the slides.

This is PQHS / CRSP / MPH 431

- Source: [XKCD](#)

First Activity

First Thing

Write down your guess of Dr. Love's age in years in the appropriate spot on the **convenient piece of paper** we've provided.

Hang on to the paper, as you'll need it again later.

Here's a picture, in case that's helpful.

Dr. Love

Course Details

Instructor: Thomas E. Love, Ph.D.

Email: Thomas dot Love at case dot edu

- (best way to reach me, although you won't use it much)

Our web site: <https://thomaselove.github.io/431-2022/>

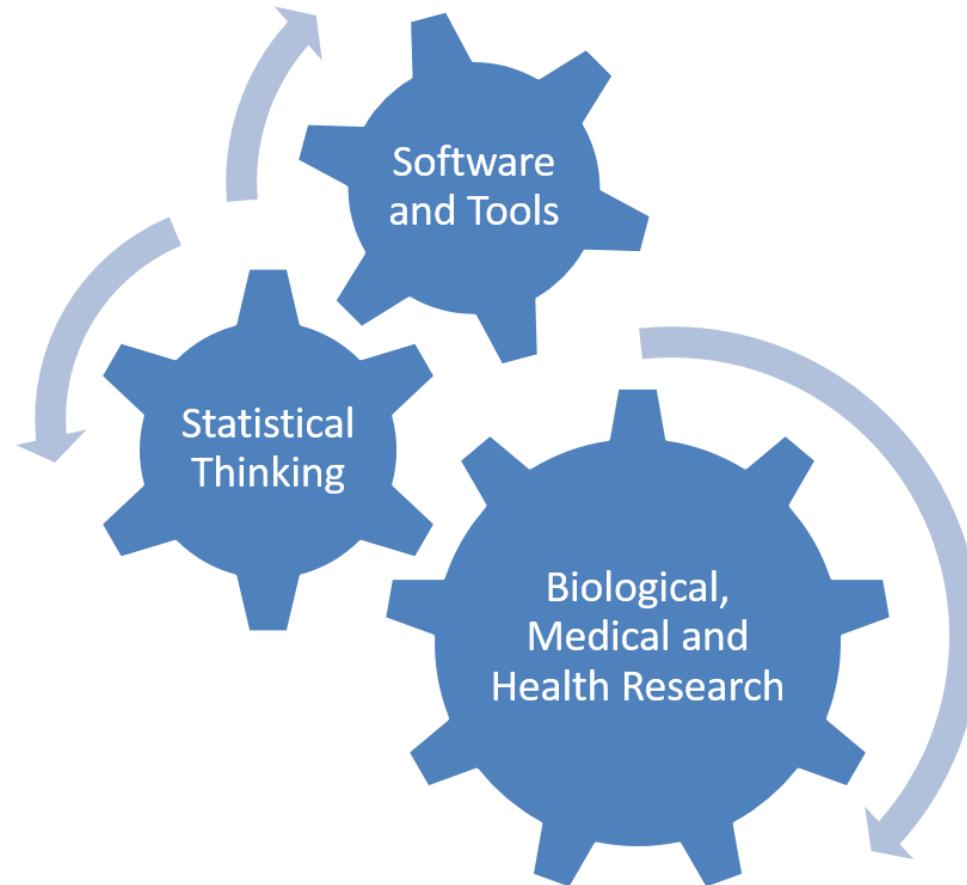

- The [Contact Us page](#) on our web site provides details on how to get help.
- If you've spent 15 minutes working on something and are stuck, don't keep working on it. **ASK FOR HELP.**

What does our web site link to?

- Course [Syllabus](#)
- Course [Calendar](#), which is the final word for all deadlines, and also links to each day's [class page](#).
- Course [Notes](#) (essentially a textbook)
- [Software Details](#) (R and R Studio, installation, data and code downloads)
- [Assignments](#): 7 Labs, 9 Minute Papers, 2 Quizzes and 2 Projects

Teaching Assistants (Fall 2022)

Structure of the 431 Course

- Exploratory Data Analysis, Visualization
- Statistical Inference, Making Comparisons
- Linear Regression and related Models

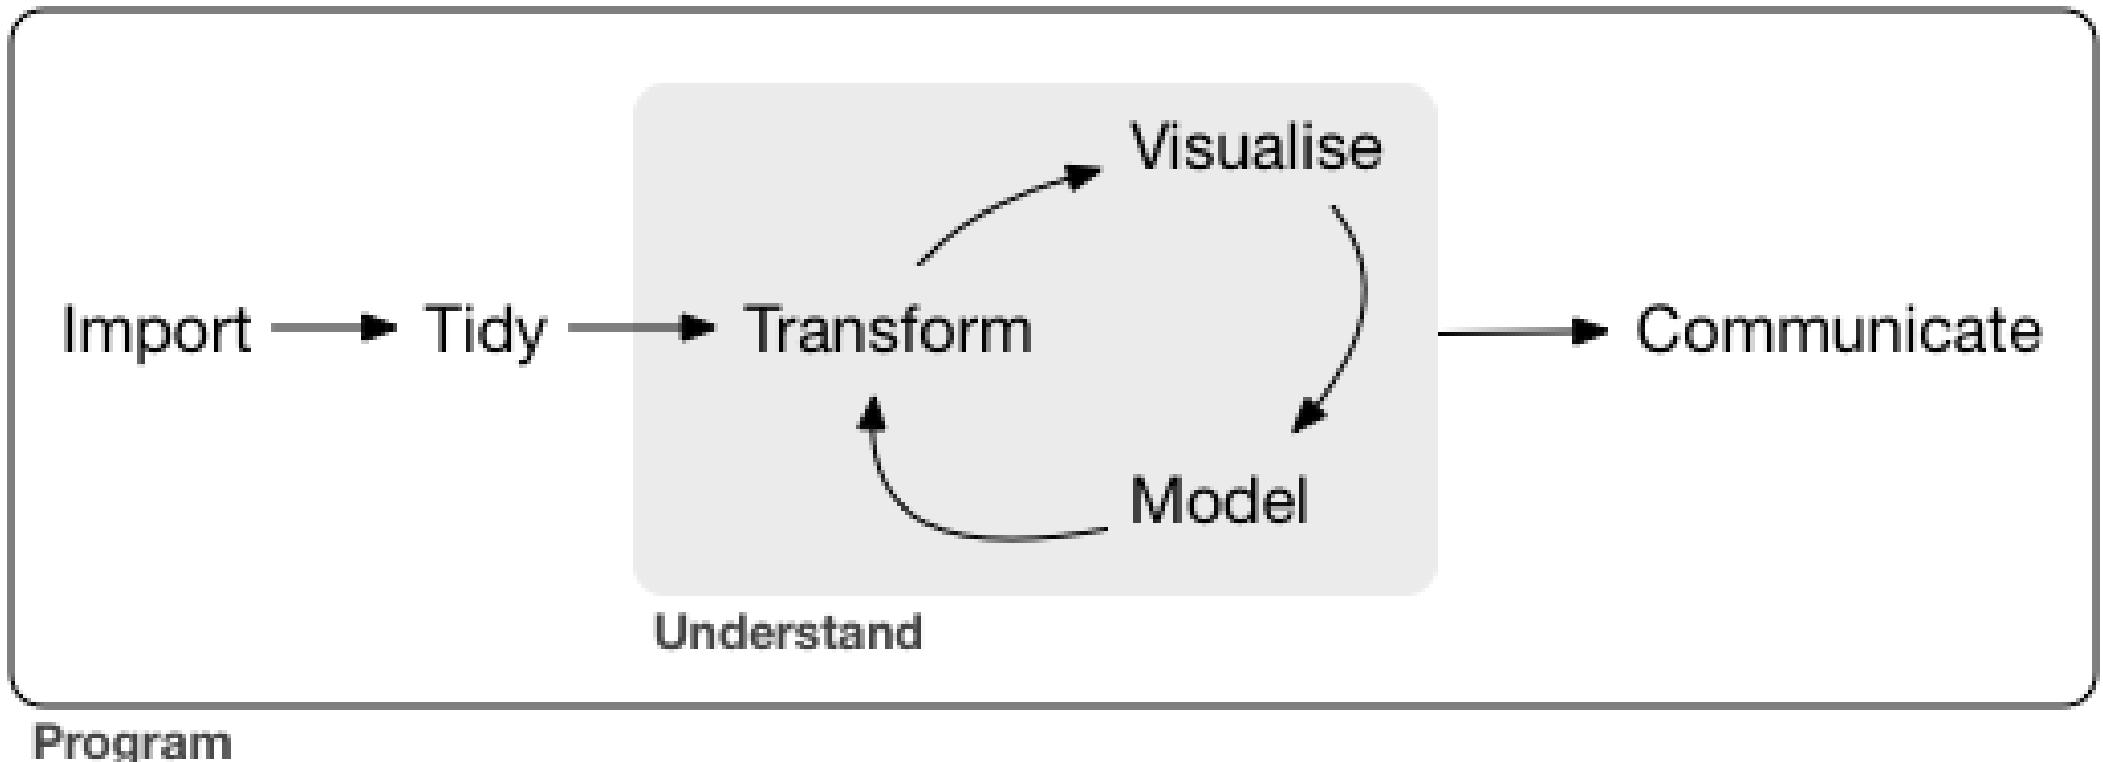

Course Philosophy (in one slide)

The course is about biostatistics, replicable research, using state-of-the-art tools (R, R Studio, R Markdown), and thinking about how science is most effectively done.

- It is more a course in **how** to do things (highly applied) rather than a theoretical/mathematical justification for **why** we do them. We focus here on practical work.
- It's mostly about getting you doing data science projects for biological, medical and health applications.

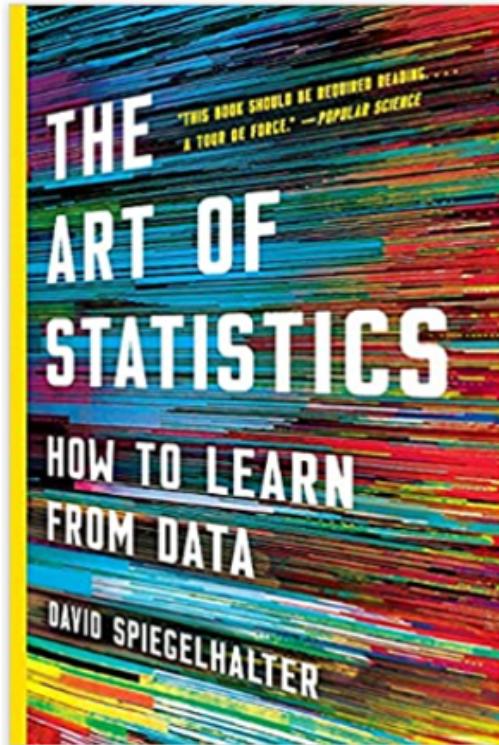

More on all of this in the [Course Syllabus](#), of course.

What is Data Science about?

What will we be reading?

Course Notes for 431

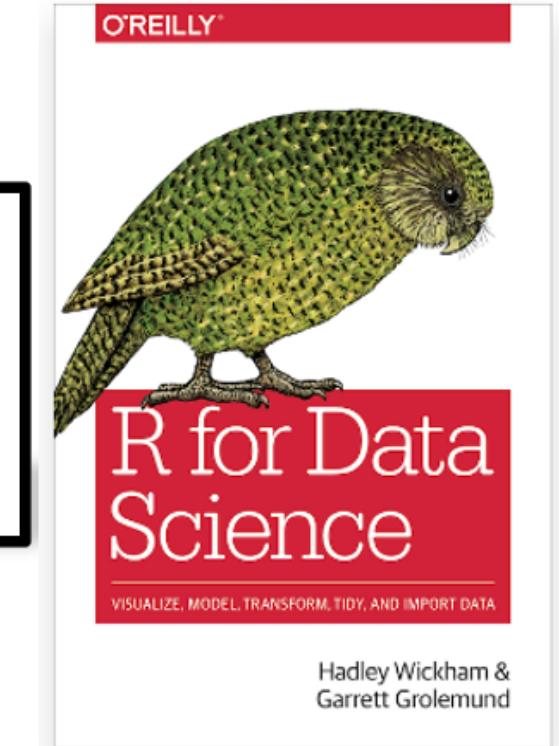

AUTHOR

Thomas E. Love, Ph.D.

PUBLISHED

August 29, 2022

Version: 2022-08-29 11:51:57.

- Readings section of our [Course Calendar](#) for more.

Tools We Use in 431

- [Main Website](#) links to everything you'll need
- [Calendar](#) (for deadlines and what's next)
- Campuswire (for discussion / Q and A outside of class)
- [Canvas](#) (for submission of work)
- Zoom (for TA office hours and class recordings)
- Shared Google Drive (mostly for answers / feedback)

Attendance

- If you have to miss a class, catch up before the next one.
- We'll try to record the classes and make them available afterwards.
- Our assignments have deadlines, which we expect you to meet.

If you will need to miss **more than two** classes in a row, or if you cannot keep up with assignments, that's when Dr. Love needs to talk with you. The [Syllabus](#) has the details, and the [Calendar](#) has the deadlines.

Great Statisticians in History

The greatest value of a picture is
when it forces us to notice what we
never expected to see.

Ten Things To Do After Class 01

1. Review the [main course website](#), being sure to visit the [Course Calendar](#).
2. Read through the [Course Syllabus](#).
3. Obtain David Spiegelhalter's *The Art of Statistics: How to Learn from Data* (~\$20).
4. Complete the [Welcome to 431 survey](#).
5. [Install the software](#) you'll need.
6. Sign up for [Campuswire](#).
7. Look at the [Course Notes](#)
8. Bookmark two books, plus the RStudio Cheatsheets (see README).
9. Ask us questions! Campuswire is available now. TA hours start 2022-09-06.
10. Take a look at Lab 01 due 2022-09-12, our first substantial assignment.

See the [Class 01 README](#) for more details.

We'll form groups in a moment

- Shortly, we will be asking you each to join a group, containing five or six people. Join a group where you will meet at least one new person.
- Also, one member of each group will serve as recorder and will need to open a Google Form on their laptop in a moment.
 - Everyone else needs nothing except their convenient piece of paper and a pen/pencil.
- Your first task is to settle on a name for your group. Try to be a little creative.

We'll be guessing some ages

- I will display a series of 10 photographs, each of a person.
- For each photo your group will ...
 - estimate the age of the person in the photo (in years)
 - have the recorder type your (group) guess into the form
(so if you guess age 35, you will just type 35.)
- When you've produced guesses for each of the 10 photos, submit the form. The recorder will get an email confirmation.
- Later, we'll reveal the true ages and compute errors.

OK. Let's form the groups.

- Remember, your group should have FIVE OR SIX people, with at least one person you don't already know.

1. Select a group name.
2. Select a recorder, who should visit the link below after logging into Google via CWRU.

<https://bit.ly/431-2022-class01-breakout>

3. Make sure everyone knows everyone else's name, as well as your group's name.

Here come the photos

- We'll give you a little more time for the first two photos than the other eight.

Remember to have the recorder fill out the form at

<https://bit.ly/431-2022-class01-breakout> although it may help all of you to keep track on paper, as well.

Photo 1

Photo 2

Making Progress

- Your group's guess for each photo should be in the form at <https://bit.ly/431-2022-class01-breakout>.
 - You might also want to keep track on your convenient piece of paper, so that when I tell you the ages later, you'll be in a position to see how your group did.
- In spare time between photos, please make the effort to learn **something** about each of the other people in your group beyond their name: perhaps what field they are in, or where they come from.

Now, guess My Age again

1. You should have an initial guess of my age written down from the start of the session.
2. Now, make a second guess of my age based on what you know about me now, and write that down next to the initial guess.

So if you guessed 18 initially, but now think I'm 19, you should write 18/19. If you still think I'm 18, write 18/18. Make it easy for us to understand your guesses of my age on the **convenient piece of paper**. Don't guess my age as a group - just write down your own guess.

Age Guessing Robots?

Well, Microsoft used to have a tool online at how-old.net to do this. There are some related robots that still do the job online, although most people are unwilling to use them.

<https://how-old.net>

The AI's guess was...

7 years too high

6 years too low

Do you think you did that well?

OK. Back to the photos!
